Chapter 15: Monopoly

Discussion section 4

November 2023

Discussion section 4 Chapter 15: Monopoly November 2023 1 / 25

Monopolies

Is Amazon a monopoly?

2/25

Discussion section 4 Chapter 15: Monopoly November 2023

Monopolies

What are some monopolies you encounter?

Discussion section 4 Chapter 15: Monopoly November 2023 3 / 25

Monopolies

What are some monopolies you encounter?

- BG&E
- Verizon (certain neighborhoods)
- Post office

Discussion section 4 Chapter 15: Monopoly November 2023 4/25

Outline

- We have focused so far on *competitive firms*; now we will look at monopolies
- This means firms with market power
 - Instead of price takers they are price makers
- Look at their behavior, implications for welfare, and government responses

But first: what is a monopoly?

Discussion section 4 Chapter 15: Monopoly November 2023 5 / 25

Characteristics of monopolies

Monopolies:

- Produce goods with no close substitutes
- Are the sole provider of that good
- Can set prices as a result of 1 and 2

Why might a monopoly emerge?

Discussion section 4 Chapter 15: Monopoly November 2023 6 / 25

Reasons for monopolies

Why might a monopoly emerge?

- Resources (mine for a rare resource)
- Regulations (patents and copyright)
- Production process (natural monopolies, economies of scale, network effects)

If monopolies can set prices, how will they decide how much to produce/at what price?

Discussion section 4 Chapter 15: Monopoly November 2023 7 / 25

Pricing decision

- How does a monopoly decide on its production?
- Just like the firm in the competitive market, monopolies want to maximize profits
- Set price too high, no one will buy the good; find the "sweet spot"

What is the demand curve that a monopoly faces? Why?

Discussion section 4 Chapter 15: Monopoly November 2023 8 / 25

Demand curve

- In a competitive market, no matter what quantity a firm produces, they sell at the market price; a *vertical demand curve*
- With a monopoly, the demand curve is now downward sloping
- Now, the firm sets the market price by their output decision

Thus we return to the demand curve from the free market equilibrium.

What happens to total revenue if we increase quantity?

Discussion section 4 Chapter 15: Monopoly November 2023 9 / 25

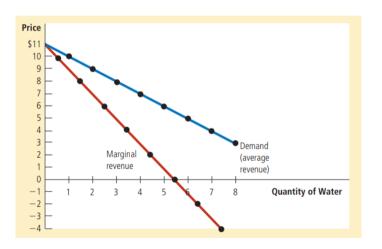

Demand

What happens to total revenue if we increase quantity?

- Remember, TR = Q * P
- So there will be two effects:
 - Output (direct) effect: increase Q → higher revenue
 - ullet Price (indirect) effect: increase Q ightarrow decreased P ightarrow lower revenue
 - (Note: for competitive firm, price effect is 0)
- Not clear ex ante which will dominate!

Discussion section 4 Chapter 15: Monopoly November 2023 10 / 25

Demand curve

Discussion section 4 Chapter 15: Monopoly November 2023 11/25

Note that P = AR.

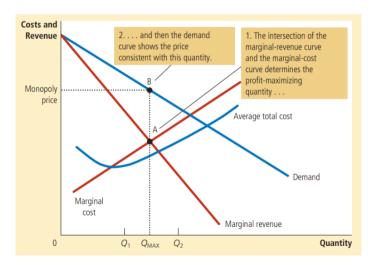

Where does the profit maximizing firm want to produce?

Discussion section 4 Chapter 15: Monopoly November 2023 12 / 25

Where does the profit maximizing firm want to produce?

- Still where MR = MC!
- If they produce below, there is extra profit to be made
- If they produce above, they are losing profits on additional units

Discussion section 4 Chapter 15: Monopoly November 2023 13 / 25

Discussion section 4 Chapter 15: Monopoly November 2023 14 / 25

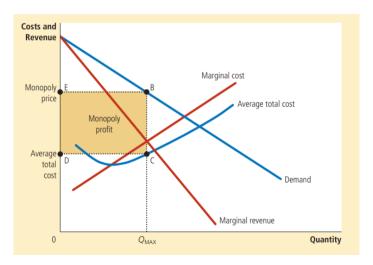

- For the competitive firm, P = MC = MR
- For the monopolist, P > MC = MR
- Producing at a lower quantity!

$$\Pi = TR - TC$$

$$\Pi = (TR/Q - TC/Q) * Q$$

$$\Pi = (P - ATC) * Q$$

Discussion section 4 Chapter 15: Monopoly November 2023 15 / 25

Discussion section 4 Chapter 15: Monopoly November 2023 16 / 25

Welfare

So, what does all this mean for society?

Is it good or bad?

How do we know?

Discussion section 4 Chapter 15: Monopoly November 2023 17 / 25

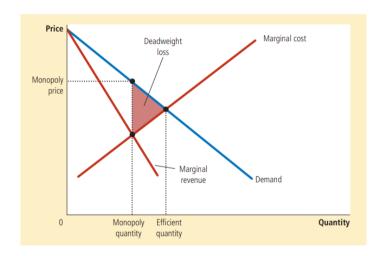

Welfare

For a normative evaluation, we need to return to our tools of welfare economics.

- Consumers pay more than they otherwise would have, and fewer are able to enjoy the good because of lower quantity
 - This suggests CS is decreasing
- But, the firm receives more revenue! So they are happy.
- What happens to total surplus? Is there any DL?

Discussion section 4 Chapter 15: Monopoly November 2023 18 / 25

Discussion section 4 Chapter 15: Monopoly November 2023 19 / 25

Welfare

- DL similar to presence of a tax
- In fact, monopoly operates much like the government
- Or government operates like a monopoly?
- Intuitively, DL comes from lower supply

Discussion section 4 Chapter 15: Monopoly November 2023 20 / 25

Price discrimination

We have assumed all consumers face the same price.

Could they charge different prices to different types of consumers? Why?

Discussion section 4 Chapter 15: Monopoly November 2023 21 / 25

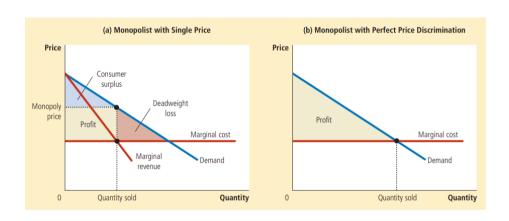

Price discrimination

This is called *price discrimination*.

- Requires market power
- May be perfectly rational
- Requires ability to distinguish between buyers
- Might be welfare improving!
 - How could this possibly be true??

Discussion section 4 Chapter 15: Monopoly November 2023 22 / 25

Welfare

23 / 25

Discussion section 4 Chapter 15: Monopoly November 2023

Government

OK, so presence of a monopoly might lead to welfare loss.

What might the government do to try and improve welfare?

Discussion section 4 Chapter 15: Monopoly November 2023 24 / 25

Government

OK, so presence of a monopoly might lead to welfare loss.

What might the government do to try and improve welfare?

- Antitrust (breaking up AT&T)
- Regulation: cap or subsidize prices
- Public ownership
- Nothing
